

# SymTrain Simulation Intelligence Agent

---

Cheng Ding, James Lauer, Harrison Rubin

# Walkthrough of Design

1. Extracted the .json files from the provided data folders
2. Merged transcript lines into one continuous string for each conversation
3. Extracted the reasons for the person calling, and the steps provided by the agent, using the Microsoft phi-3-mini-4k-instruct transformer and GPT-5
4. Categorized each conversation into one of 8 categories (refer to next slide), using the Facebook bart-large-mnli transformer and GPT-5
5. Built Streamlit app that categorizes test data and provides steps for the agent to take
6. Built Docker file and Docker image

# Categories of Conversations

# SymTrain Customer Assistance Tool

Customer request:

Hi, can you help me file a claim

Run

## Generated Response

Predicted Category

Insurance Claims & Coverage

Number of Steps

22

## Steps

1. Greet the customer and acknowledge their request to file a claim, expressing willingness to help.
2. Determine what type of claim they want to file (e.g., auto, home, health, life, disability, other) by asking a clarifying question.
3. Ask for the customer's full name and any other basic identifying details needed by your company (e.g., date of birth, phone number, or last four digits of SSN) to locate or create their account.
4. Request the relevant policy or account number associated with the claim so you can access the correct policy in the system.
5. Verify the customer's identity according to your company's authentication requirements (e.g., security questions, mailing address, or email on file).
6. Confirm that the correct policy has been pulled up and restate the purpose: to file a new claim for the specific incident or loss.
7. Ask for the date and approximate time of the incident or event that is leading to the claim.
8. Gather a brief description of what happened, in the customer's own words, including how, where, and why the incident occurred.

Deploy :

# SymTrain Customer Assistance Tool

Customer request:

Hi, I recently ordered a book online. Can you give me an update on the order status?

Run

## Generated Response

Predicted Category

Order Status & Fulfillment

Number of Steps

15

### Steps

1. Greet the customer and acknowledge their request for an order status update.
2. Ask the customer for their order identifier (order number, confirmation number, or account details).
3. Request additional verification details as needed (e.g., email address on the order, full name, and shipping address) to confirm the customer's identity.
4. Access the order management system and locate the order using the provided information.
5. Review the order details, including items purchased, order date, and current status (e.g., processing, shipped, delivered, canceled).
6. If the order has shipped, check the shipment details and carrier tracking information, including ship date and estimated delivery date.
7. Communicate the current status of the order clearly to the customer, including the shipping date, carrier, tracking number, and expected delivery timeframe if available.
8. If tracking shows the order as delivered, ask the customer to check common delivery locations (mailbox, porch, side/rear doors, building office, neighbors).
9. If the customer still cannot locate a delivered package, review internal policies to determine whether to treat the order as lost in transit.
